About Me

Data Science and Machine Learning enthusiast experienced in building end-to-end predictive systems and dashboards. Skilled in ML, statistical analysis, and solving real-world problems like churn prediction, A/B testing, and predictive maintenance.

Skills

- Python(NumPy · Pandas · Scikit-learn)
- Machine Learning(LightGBM , XGBoost · SHAP, Regression,)
- Data Anlysis and EDA(Statistical Modeling SQL
- Visualization(Matplotlib · Seaborn · Plotly)

Education

- Bachelor of Technology in Computer Science**
Jaipur National University 2024-2028
Jaipur, Rajasthan
Current Semester : 4th
CGPA : 8.0
- Senior Secondary (Class 12th)**
Sheonedi Sao College 2020 - 2022
BSEB -2022
Percentage : 77.8%

Projects

- RailGuard AI Predictive Maintenance System**
Python, Machine Learning, Dashboard UI 2026
Designed an end-to-end predictive maintenance system to monitor train health using simulated sensor data
Implemented multi-level monitoring system (train, route section, bogie, sensor level) for granular risk analysis
- Customer Churn Prediction System**
LightGBM, FastAPI, SHAP 2026
Built customer churn prediction system using LightGBM achieving high classification performance
Integrated SHAP explainability to interpret model predictions and feature importance
- A/B Testing & Statistical Inference Dashboard**
Python, Statistics 2026
Developed statistical analysis platform supporting Frequentist and Bayesian A/B testing
Implemented multiple hypothesis testing methods including t-test, z-test, chi-square, Mann-Whitney U
- Hybrid Time Series Forecasting System**
Python, Machine Learning 2026
Built forecasting models using regression and time-series techniques
Performed model evaluation using RMSE and MAPE
Applied hyperparameter tuning for performance optimization
